

Project name**EUROPEAN NETWORK IN D-FLEXIBLE TEACHING
/ENID-Teach/****Description**

The main aim of the ENID-Teach project is to create a university network that strengthens the links between European universities to facilitate the transfer of knowledge and the exchange of good practices in digital and flexible teaching.

Organizations from Bulgaria, Spain, Italy, Portugal, and France are involved in the project.

All partner countries face serious challenges in adapting the education system to the situational needs posed by the digital and/or blended model.

The project will address this common need by developing and implementing a learning program that introduces innovative resources, and tools and methodologies for quality digital university education with a special focus on online learning methods that teachers can apply and adapt to their subjects and students.

The main activities of the project are related to the development of:

- Training Programme on digital skills in Flexible and Innovative Teaching Methodologies;
- Five NOOCs (Nano Massive Open Online Courses) in flexible teaching methodologies;
- Guide to good practices in flexible digital pedagogies;
- European network in D-flexible teaching;
- Effectiveness research of microlearning based on NOOC.
